

Exercise Report: S-300 Readiness Drill

During the recent air defence exercise, the participating S-300 surface-to-air missile regiment mobilised 200 personnel and sustained a 250-hour continuous readiness posture over the exercise period.

Air activity generated 300 simulated sorties against the S-300 battery, which maintained crew rotations on a 12-hour cycle. The drill assessed command-and-control procedures rather than missile performance, and no live firings were conducted.
