

S-350 Vityaz Medium-Range Air Defence System

The S-350 Vityaz is a medium-range surface-to-air missile system of Russian origin, designed to engage aircraft, cruise missiles and precision munitions. The S-350 employs the 9M96 family of active-radar missiles from a vertical-launch cell configuration.

The Vityaz air defence system reportedly offers a maximum engagement range of 120 km and can track a large number of targets simultaneously using its 50N6A phased-array radar. It entered Russian service in 2019 as a complement to longer-range systems.
